that nation. It is very likely that such an incident may have changed greatly since the time when the *Journal of the American Medical Association* reported that "the [university] hospital had been closed for two days by the influenza epidemic." Influenza was one of the leading killers of the 1918-19 season, but the *Journal* did not mention it. It is possible that the epidemic was not as severe as it was in 1918-19, but it is also possible that the epidemic was not as severe as it was in 1918-19.

granted to those who are not citizens and who are not born in the United States. The law also provides for the naturalization of those who are not citizens and who are not born in the United States.

the following steps are recommended: (1) identify the problem; (2) determine the cause of the problem; (3) develop a plan of action; (4) implement the plan; (5) evaluate the results. The first step is to identify the problem. This can be done by looking at the data and asking questions such as: What is the problem? How big is the problem? When did the problem start? Where is the problem? Who is affected by the problem? The second step is to determine the cause of the problem. This can be done by looking at the data and asking questions such as: What caused the problem? How did the problem start? What factors contributed to the problem? The third step is to develop a plan of action. This can be done by looking at the data and asking questions such as: What actions should be taken to solve the problem? How should the actions be implemented? The fourth step is to implement the plan. This can be done by following the plan of action. The fifth step is to evaluate the results. This can be done by looking at the data and asking questions such as: Did the problem get solved? How did the problem get solved? What lessons were learned from the problem?
